OK. We are lining things up this morning for manager review and letter signature. You and I will have to know timing of documents to coordinate.

EPA ROD for Reynolds

To  
cc  
Subject

Chip, here is a redline version of the ROD from yesterday showing DEQ comments. I have made several general edits, as well as put in language about the silt unit where it seemed appropriate. Paul has added some comments in the risk section. I have a draft concurrence letter prepared that does not have caveats. I need to let you know that if we can't include language clarifying the idea of protectiveness for the underlying drinking water from migration of fluoride from the silt unit, and have a document forthcoming with performance decisionmaking outlined, then this would have to be included in the concurrence letter.

One other comment that Paul had was that on Table 7.6 Benzo (a) Pyrene is shown as 38% of risk for the east plant area but numerically shown as  $5 \times 10^{-6}$ . Paul indicates that if BaP is 38% of risk then it should be shown as  $4 \times 10^{-6}$ . You may want to double check this number.

I plan to forward the state concurrence letter for signature Thursday morning. I would like to have the ROD on Thursday to forward to the DEQ signer (that should be Joni Hammond, Acting Deputy Director) so she can have that for reference. The letter is actually dated for Friday 9/29 and a copy could be faxed to you then. You need to let me know when you need the state concurrence letter if it is different from what I have outlined.

Good luck on finalizing.
